PROFESSIONAL PROFILE

Product and data systems builder with 10 years of experience turning complex requirements, performance data, and operational friction into practical tools, workflows, and measurable outcomes. Recent work includes full-stack web applications, Android development, database-backed analytics, CSV/data-import pipelines, automated business rules, and AI-assisted software development. Combines quantitative problem solving with strong communication, stakeholder empathy, training, and end-to-end product ownership.

SELECTED PRODUCT & TECHNICAL PROJECTS

Teacher Grade Analytics — Product Owner / Developer 2026 – Present

Next.js • React • TypeScript • Supabase/PostgreSQL • Vercel • Vitest • Google OAuth

- Designed and developed a responsive teacher/student grade-management platform with reusable courses, sections, enrollment, grading rules, retakes, missing-work workflows, analytics, and student self-service.
- Built and iterated a grading engine with automated tests for dropped quizzes, retakes, missing work, grade audits, and personalized study recommendations; directed an 100+ pull-request development workflow using Git branches, CI checks, Vercel previews, and production deployments.
- Implemented database-backed authentication and role-aware access patterns, with product decisions shaped around data privacy, auditability, and real classroom workflows.

YGOSB Course Dashboard — Product Owner / Developer 2026 – Present

Next.js • React • TypeScript • Supabase/PostgreSQL • Vercel • CSV/Data Import

- Designed a dual-mode course platform supporting traditional grading and credit-recovery workflows with configurable mastery thresholds, completion rules, grade calculations, and credit eligibility.
- Developed IXL CSV ingestion and reconciliation workflows with student matching, duplicate protection, highest-score preservation, audit history, structured change previews, and next-work prioritization.

Pet Status — Android Product Owner / Developer 2026 – Present

Kotlin • Jetpack Compose • Firebase • Android Studio • Gradle

- Built a multi-device household pet-care app with shared event history, independent timers, notes, reminders, quiet hours, editable settings, notification history, and invitation-code household joining.
- Managed testing and release workflows, device-to-device synchronization behavior, background/notification edge cases, and iterative UI improvements based on real household use.

CORE CAPABILITIES

Analysis & Systems: requirements analysis, process improvement, data analysis, business rules, workflow design, testing, debugging, auditability, stakeholder needs

Technical: Next.js, React, TypeScript, JavaScript, SQL/PostgreSQL, Supabase, Python, Kotlin, Jetpack Compose, Firebase, HTML/CSS, Excel, Google Sheets, Git/GitHub, Vercel

AI & Collaboration: ChatGPT, Codex, AI-assisted development, prompt/requirements design, technical documentation, facilitation, training, cross-functional communication

PROFESSIONAL EXPERIENCE

LaVille Jr-Sr High School — Mathematics & Computer Science Educator | Lakeville, IN

Aug 2016 – Present

- Own the design, delivery, assessment, and continuous improvement of multiple concurrent courses spanning foundational algebra through college-level calculus, statistics, and computer science.
- Maintain a 99%+ calculus pass rate across 10 years through ongoing performance analysis, early intervention, iterative process changes, and clear communication of expectations.
- Translate complex quantitative and technical concepts for varied audiences, adapting explanations, workflows, and resources based on observed performance and user needs.
- Design data-driven instructional tools and digital workflows to reduce administrative friction, improve visibility into performance, and give students clearer next actions.
- Teach college-credit computer science coursework including introductory programming and computing concepts, strengthening practical experience with software logic and technical problem solving.

Yeshiva Gedolah of South Bend — Mathematics Teacher (Part-Time)

Aug 2025 – Present

- Deliver mathematics instruction in a specialized setting while independently adapting pacing, materials, and assessment to learner needs; building a separate digital course-management platform to support the program.

Sylvan Learning Center — Mathematics & Reading Tutor

May 2024 – Aug 2025

- Conducted individual needs assessments and delivered targeted one-on-one and small-group instruction across varied ages and ability levels.

Michigan State University — Mathematics & Physics Tutor

Aug 2012 – Jul 2015

- Explained complex quantitative concepts through multiple approaches, identified recurring failure points, and adapted support to individual needs.

EDUCATION

Indiana University East — Master of Arts for Teachers, Mathematics | 2021

Graduate Certificate in Mathematics

Michigan State University — Bachelor of Science, Mathematics | Minor: Physics | 2015

Provisional Teaching Certificate • Dean's List: Spring 2013, Fall 2014
